

# 大学院特別講義のご案内

◆ 日時: 2013年5月20日(月) 17:00~19:00

◆ 場所: 口腔科学研究棟5F 弓倉記念ホール

◆ 講師: **Prof. Manfred Friedman**  
**University of Western Ontario**

◆ 演題: **“Endodontic treatment of the young permanent tooth”**

◆ 要旨: Endodontic treatment on the young permanent tooth is complicated by an open apex often with a “blunderbuss” anatomy. This makes cleaning and shaping as well as Obturation very difficult. The lecture will discuss conservative treatment of the pulp in order to preserve it's vitality allowing for further root development. I will also briefly discuss the protocol for regenerating pulp tissue in those teeth with an open apex and necrotic pulp.
