

# 大学院特別講義のご案内

- ◆日時： 2017 年 11 月 17 日(金) 17:30~19:00
- ◆場所： F 棟 5 階 弓倉記念ホール
- ◆講師： Prof. Irma Thesleff (ヘルシンキ大学・教授)
- ◆演題： The roles of conserved signaling pathways in tooth development and regeneration

◆要旨： The progress of research in several fields including developmental biology, cell biology and genetics has been extremely rapid during the last twenty years. As a result, tooth development is today understood in great detail at the level of cells, genes and molecules. Our work has focused on the mechanisms regulating the development of teeth, including their initiation, morphogenesis and regeneration.
